ZYBERSAFE

We hereby confirm that a penetration test of two Zybersafe TrafficCloak devices was performed between February 6th and February 28th 2018.

Both devices under test were of the type ZS21526-1G with a build date of Jan 11 2018 09:28:22.

All test cases were performed as described in this document.

All test cases passed according to the described expectations.

All client traffic passing through the WAN ports was encrypted using AES256 (confirmed by reviewing the source code provided to nedeco).

nedeco has not found any way to break or weaken the encryption.
